

Final Interview Script

Context

- What is your current role?
- How long have you been working in software development?
- Which AI tools do you use in your work?
- How frequently do you use these tools?

General Use of AI

- In what types of activities do you typically use AI?

Real Episode

- Can you describe a recent case in which you used AI to carry out a development activity, from the beginning to the final outcome?
- Please describe how this happened in your day-to-day work, for example while working on a task.

Checklist

- How did the task begin (e.g., what did the participant receive or need to do)?
- At what point did AI enter the workflow (e.g., at the beginning, midway, or only at the end)?
- In which parts of the task was AI used (e.g., understanding the problem, writing code, generating tests, reviewing, etc.)?
- What was provided to the AI (e.g., how was the problem described)?
- How was AI used in each stage (e.g., direct requests, iterative refinement, support for reasoning)?
- What was done with the AI-generated output (e.g., used directly, adapted, discarded)?
- How was the final result validated (e.g., testing, review, comparison, intuition)?

Specification Practices

- When you use AI for a task, how do you define what needs to be done? Do you already have this clearly defined beforehand, or does it emerge throughout the interaction?

Changes in Work Practices

- Has the use of AI changed the way you work? If so, how?

Limitations and Challenges

- What was your process like when you first started using AI?
- How do you feel about using AI today? Do you prefer working with AI or the way you worked before?
- Are there situations in which AI does not help as expected?

Future Improvements

- What types of practices, guidance, or tools could improve the use of AI?
